

FALL PROTECTION OBJECTS FOR YOUR BIM MODEL

COMPLETE YOUR BIM MODEL WITH XSPLATFORMS FALL PROTECTION

Why add fall protection objects to a BIM model?

A BIM model, Building Information Model, is a 3D model that is build from seperate objects that provide building information. Adding objects, based on the prescribed safety demands is an ordinary affair. Think of fire extinguishers, emergency exits, but also of fall prevention objects.

By adding fall protection to your 3D model you show that...

- you are up to date with the latest rules and regulations.
- you contribute to the process of providing solutions.
- you have taken the integration of "mandatory fall protection precautions" into account.

What do we offer?

- ✓ Advice and support with the placement of objects in your 3D model.
- ✓ The most recent objects based on certified fall protection products - from single anchor point to guardrail system.
- ✓ Integrated fall protection in your design which is praised by the market by its quick installation and minimal impact to the design of a building.
- ✓ Training: how do you, as an architect/designer, deal with fall protection in your 3D model?

File formats

We offer our objects for various 3D software packages:

FALL PROTECTION FOR EVERY DESIGN

XSPLATFORMS OFFERS THE BEST SOLUTION WITH MINIMUM IMPACT TO YOUR DESIGN

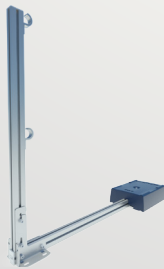

Why fall protection?

The obligation of fall protection is stated in the local rules or regulations standard which can differ per country/region. Falls from height are one of the most common causes of accidents at work. By most laws a safe work environment has to be facilitated by building owners or managers.

To prevent adjustments to a system at a later stage, it is best to implement fall protection as early as possible when a building is designed.

WHAT TYPES OF FALL PROTECTION DO WE OFFER?

GUARDRAILS

HORIZONTAL LIFELINE
SYSTEMS

SINGLE ANCHOR
POINTS

AESTHETIC RESPONSIBLE FALL PROTECTION

All our solutions are designed to minimize the impact or architectural value of a building, without having the worker safety compromised. We offer a fitting solution for each situation that perfectly goes with the design of a building.

Questions?
